INTRODUCING

Teflon®
CLEAR COAT LENSES

For clearer, crisper vision

New Teflon® Clear Coat Lenses: Now you can see clearer and crisper than with ordinary lenses.

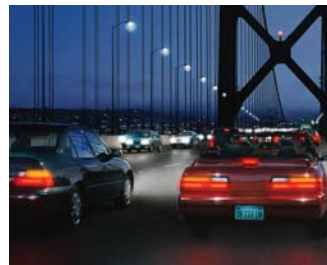

Ordinary eyeglass lenses cause reflections.

These reflections create hazy, fuzzy, ghost images and halos that interfere with your vision.

Lens reflections make it harder for you to see – especially in situations like driving at night, working at a computer, watching TV, and working under fluorescent lights.

ORDINARY LENSES

TEFLON® CLEAR COAT LENSES

Teflon® Clear Coat Lenses eliminate lens reflections, so you get the clearest, crispest vision available in eyeglasses.

ORDINARY LENSES

TEFLON® CLEAR COAT LENSES

Teflon® Clear Coat Lenses help you look better too, because they eliminate reflections that keep people from seeing your eyes.
